

Good day,

My name is Kawooya Steven and I'm a software engineer since 2013. I have a BSc in Software Engineering and Application development. Over the years I have grown as a developer, team lead, and project manager. I have worked with start-ups, with the latest project being the farm-manager app this year. I have very good communication with both product owners and the technical team. I believe in good team work as this is key to the success of any project. I'm self-driven and result oriented many of the times. I'm very adaptable to new situations and environments.

I'm both a front-end and back-end developer. I have worked on both web and mobile applications. Have good knowledge of databases. I have worked with languages like Javascript, react, react-native for mobile, python, Django REST framework, HTML, MySQL, sqlite, NodeJS, MongoDB, CSS among others. I have built systems with APIs and have successfully integrated APIs into systems.

I'm quite passionate about all enterprises that have impact on the lives of people and the community as a whole. It would be quite fulfilling to work at AirQo as it strives to improve awareness and health of people by tackling air quality. Taking a preventive approach as compared to a treatment approach is in the best interest of all stakeholders.

I look forward to working with you in your organisation for a better environment.

Kawooya Steven
